MAJOR

### Accessibility Statement, VPAT & Self-Audit Published

Published our first full public accessibility conformance report, self-audit dashboard, and this changelog. This is the foundation of our ongoing transparency commitment.

- ✓ Published VPAT against WCAG 2.1 AA covering all 50 success criteria with pass/fail/partial status and remediation notes. [All SCs](#)
- ✓ Published Accessibility Statement with conformance status, known gaps, testing methodology, and contact information with 2-business-day SLA.
- ✓ Published Self-Audit Dashboard showing live scan results from our own platform running against [adawcag.org](#).
- ✓ Added "Report an Issue" modal on all public pages, giving users a direct channel to flag accessibility barriers with a 2-day response commitment.

#### IMPROVEMENT

## Skip Link + Focus Indicators Overhauled

Addressed the two most impactful keyboard navigation issues reported by users: missing skip navigation and invisible focus states on dark backgrounds.

- ✓ Added "Skip to main content" link as first focusable element across all pages. Positioned absolutely, becomes visible on `:focus`. [SC 2.4.1](#)
- ✓ Redesigned focus indicators across all interactive elements. Now uses a high-contrast outline (3px solid) that meets 3:1 contrast on all backgrounds. [SC 2.4.7](#)
- ✓ Removed `outline:none` from all CSS rules. Was suppressing browser default focus indicators site-wide.

#### BEFORE

```
* { outline: none; }
```

#### AFTER

```
:focus-visible {  
  outline: 3px solid  
  #00e5b0;  
  outline-offset:  
  3px;
```

```
    }  
}
```

**FIX**

## Form Labels & Error Messages Fixed

Two forms on the signup and contact pages had unlabeled fields and missing error messaging. Fixed after a user report from a JAWS user who couldn't complete signup.

- ✓ Added explicit `<label>` elements to all form inputs. Previously using placeholder text as the only label, which disappears on input. [SC 1.3.1](#)
- ✓ Added `aria-required="true"` and visual asterisk to required fields with a legend explaining the indicator. [SC 3.3.2](#)
- ✓ Added `aria-describedby` linking error messages to the fields they describe. Error text now announced by screen readers on field exit. [SC 3.3.1](#)
- ✓ Added `aria-invalid="true"` to fields with errors, providing clear programmatic state for assistive technologies.

**IMPROVEMENT**

## Heading Hierarchy Restructured

The homepage and pricing page used h1 and h3 with no intervening h2, causing screen reader navigation by heading to skip logical sections.

- ✓ Restructured heading hierarchy across homepage, pricing, and scan tool pages. Now follows strict h1 → h2 → h3 nesting. [SC 1.3.1](#)
- ✓ Added landmark regions (<main>, <nav>, <footer>) with aria-label attributes on all pages. Enables jump navigation in screen readers.

FIX

### Color Contrast Pass for All Body Text

An audit found that secondary text (muted color on dark background) fell below 4.5:1 in several sections. Adjusted the color token across the design system.

- ✓ Updated --muted color token from #777799 to #8888aa. New ratio: 4.8:1 on bg #0a0a0f. Meets AA standard. [SC 1.4.3](#)
- ✓ Verified all 14 color combinations in the design token system using both WCAG 1.4.3 and APCA methods.

Ongoing

IN PROGRESS

### Active Work – Coming Soon

These improvements are actively in development and will be logged here when shipped.

-  **Dashboard chart focus indicators** — upgrading to meet WCAG 2.2 SC 2.4.11 Focus Appearance. ETA: March 2026. [SC 2.4.11](#)
-  **Mobile menu Escape key handler** — adding keyboard dismiss behavior to nav menu. ETA: Late February 2026. [SC 2.1.1](#)
-  **PDF table reading order** — adding proper structure tags to generated reports for screen reader compatibility. ETA: April 2026. [SC 1.3.1](#)
-  **WCAG 2.2 full audit** — manual review of all new 2.2 criteria including target size minimum and dragging alternatives. ETA: Q2 2026.
