

TRANSPARENCY · SELF-AUDIT

We Scan Ourselves

We use our own platform to monitor ADAWCAG.org for accessibility issues. This is a live view of our current scan results — unfiltered.

Last scan: Feb 26, 2026 at 06:00 UTC

Radical transparency: These results are generated by our own scanning infrastructure running against adawcag.org. We publish them unedited, including issues we haven't fixed yet. Automated scanning catches ~30–40% of WCAG issues — see our [Accessibility Statement](#) for our manual testing results.

Open Issues (Automated Detection)

SERIOUS axe: color-contrast-enhanced

Chart elements missing keyboard focus indicator 3 occurrences **In Progress**

Interactive data points in the scan-tool demo chart do not have a visible focus outline meeting 3:1 contrast. Affects keyboard and switch access users.

Detected on: /en/ada-wcag-scan-tool

SERIOUS axe: aria-live-region

ARIA live region missing on scan progress updates 1 occurrence **In Progress**

Scan progress status changes in the dashboard are not announced to screen readers because the container lacks an aria-live attribute.

Detected on: /en/ada-wcag-scan-tool

MODERATE axe: aria-required-attr

Tooltip role missing from hover cards

4 occurrences

Open

Hover cards in the pricing comparison table lack role="tooltip" and aria-describedby linkage, so assistive tech cannot identify their relationship to the triggering element.

Detected on: /en/pricing

MODERATE

Mobile menu Escape key handler not implemented

pally: keyboard-access

1 occurrence

In Progress

The hamburger navigation menu does not close on Escape key press, violating expected keyboard behavior for disclosure widgets per ARIA APG.

Detected on: All pages (mobile viewport)

Issues marked "In Progress" have engineering tickets open and active work underway. See the [Changelog](#) for resolved issues. Found something we missed? [Report it here](#).
